No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                               1240

Sequence 3, Application US/09253691
Patent No. 6124100
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Dong Kyu JIN
TITLE OF INVENTION: Using Trinucleotide Repeats Sequence
TITLE OF INVENTION: Using Trinucleotide Repeats Sequence
FILE REFERENCE: 1942/36
CURRENT APPLICATION NUMBER: US/09/253,691
CURRENT FILING DATE: 199-02-22
FARLIER APPLICATION NUMBER: KR 98-6,278
EARLIER FILING DATE: 196-02-26
NUMBER OF SEQ ID NOS: 3
SOFTWARE: WordPerfect 6.1/Windows
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        992
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Appli

Sequence 18, Application US/09491356C

Sequence 18, Application US/09491356C

Patent No. 656G061

GENERAL INFORMATION:

APPLICANT: Philibert, Robert A.

APPLICANT: Gimms, Edward I.

APPLICANT: Delisi, Lynn

TITLE OF INVENTION: IDENTIFICATION OF POLYMORPHISMS IN THE PCTG4 REGION OF XQ13

TITLE OF INVENTION: 1050-01-26

CURRENT APPLICATION NUMBER: US/09/491,356C

CURRENT FILING DATE: 1999-04-29

PRIOR FILING DATE: 1999-04-29

PRIOR FILING DATE: 1998-04-29

PRIOR FILING DATE: 1998-04-29

NUMBER OF SEQ ID NOS: 24

SOSTWARE: Patentin version 3.1

TEMBER OF SECTION NOR SECTION NUMBER: US/09/100365

PRIOR FILING DATE: 1998-04-29

NUMBER OF SEQ ID NOS: 24

SEQ ID NO 18
